PHY 105 — General Physics

Force equals mass times acceleration for a body of constant mass.

The period of a simple pendulum depends on its length.

Refraction bends light when it passes from one medium into another.

The acceleration due to gravity is about 9.8 metres per second squared.

Work is done when a force moves an object along its direction.

Pressure in a fluid increases with depth.

Newton's first law states that a body remains at rest or in uniform motion.

Friction opposes relative motion between two surfaces in contact.

Energy can be transformed from one form to another but not created or destroyed.

Ohm's law relates voltage, current, and resistance in a conductor.

Momentum is conserved in an isolated system.
