PHY 105 — General Physics

Lab 2 — Simple Harmonic Motion

Work is done when a force moves an object along its direction.

Ohm's law relates voltage, current, and resistance in a conductor.

Momentum is conserved in an isolated system.

The acceleration due to gravity is about 9.8 metres per second squared.

Energy can be transformed from one form to another but not created or destroyed.

Force equals mass times acceleration for a body of constant mass.

Friction opposes relative motion between two surfaces in contact.

Newton's first law states that a body remains at rest or in uniform motion.

Pressure in a fluid increases with depth.

The period of a simple pendulum depends on its length.

Refraction bends light when it passes from one medium into another.

A vector quantity has both magnitude and direction.
