Mitosis produces two genetically identical daughter cells.

Ecosystems consist of communities of organisms and their physical environment.

The cell is the basic structural unit of living organisms.

BIO 150 — General Biology

Deoxyribonucleic acid carries hereditary information from parents to offspring.

Photosynthesis converts light energy into chemical energy.

Respiration releases energy from glucose in living cells.

Enzymes lower the activation energy of biochemical reactions.

Punnett squares predict the outcome of simple genetic crosses.

The plasma membrane controls the movement of substances into the cell.

Proteins are synthesised from amino acids at the ribosome.

Osmosis is the movement of water across a semi permeable membrane.
