BIO 150 — General Biology

Bacteria are prokaryotes without a membrane bound nucleus.

Photosynthesis converts light energy into chemical energy.

Respiration releases energy from glucose in living cells.

Ecosystems consist of communities of organisms and their physical environment.

Proteins are synthesised from amino acids at the ribosome.

Deoxyribonucleic acid carries hereditary information from parents to offspring.

Mitosis produces two genetically identical daughter cells.

Punnett squares predict the outcome of simple genetic crosses.
