BIO 150 — General Biology

Field Trip Notes

Deoxyribonucleic acid carries hereditary information from parents to offspring.

Punnett squares predict the outcome of simple genetic crosses.

Photosynthesis converts light energy into chemical energy.

Enzymes lower the activation energy of biochemical reactions.

Osmosis is the movement of water across a semi permeable membrane.

The plasma membrane controls the movement of substances into the cell.

Respiration releases energy from glucose in living cells.

Ecosystems consist of communities of organisms and their physical environment.

Bacteria are prokaryotes without a membrane bound nucleus.
