MTH 101 — Elementary Mathematics I

Indices follow the laws of exponents under multiplication and division.

Surds are irrational roots written in simplified form.

The gradient of a curve at a point is found by differentiation.

Partial fractions split a rational expression into simpler terms.

A straight line in the plane has the equation y equals mx plus c.

Logarithms convert multiplication into addition.

The binomial expansion gives the coefficients of powers of a sum.

The discriminant determines the nature of the roots of a quadratic equation.

Simultaneous equations can be solved by substitution or by elimination.
